

Beef Starter Pellets

A safe grain based pellet which is suitable for feeding free choice from a field bin from 1 – 21 days. It contains buffers and an ionophore to reduce the likelihood of acidosis. Available in bulk or bags (min. 2 tonnes in bags).

Feeding Directions

Feedlot Ration

Days on Feed	Proportion of Pellets	Proportion of Hay or Silage
1 to 7 days	34%	66 %
7 to 18 days	50%	50 %
18 to 30 days	67%	33 %
30 days to Slaughter	80 %	20%

Pasture Supplement

The Beef starter pellet can be placed straight into a field bin and is safe to feed ad lib provided that there is adequate dry standing feed or pasture. If pasture is limiting, it is advisable to feed cattle on hay only for a day or two before introducing the pellets from the field bin ad lib. Hay or straw must be available in rinds during the initial adjustment period.

Specifications on a dry matter basis

Nutrient	Level	Nutrient	Level
Crude Protein	15 %	Salt	0.5%
ME	12 MJ	Monensin	30 mg/kg
Calcium	0.8 %	Lucerne	6%
Phosphorus	0.3%	Molasses	2 %
